FX Simulation's money making

TWO SEATER MOTION SIMULATOR

The U2 Mirage has proven it can sustain its takings over and over again, due to the wide appeal from young children to adults and the choice of six rides. The U2 Mirage has a steady income stream with no drop off in takings, a weakness that many single game arcade machines suffer from.

Due to its compact footprint, most sites are suitable for the U2 Mirage. All that is required from a site is power, space and a steady footfall. This can be a cinema, bowling centre, arcade, shopping complex or any other site which attracts large amounts of people.

The U2 Mirage has had unrivaled success in the UK leisure market, with over fifty simulators sited in the UK. We have the tool if you have the site.

Quoted by FHM magazine as "The UK's most popular simulator." The secret to our success is the experience every customer gets. Every customer is satisfied with their experience every time, which keeps them coming back and spending with us repeatedly.

For more information call +44 (0) 1334 65 75 75 or visit www.fxsimulation.com

Attention to detail

Below left to right: Every U2 Mirage receives strict testing before it goes on site.

The rider gets a choice of six rides, selectable by buttons once inside the cabin.

An internal safety grab rail gives maximum flexibility for riders of different age groups to hold on.

The U2 Mirage's trade mark gull-wing doors allow riders to enter and exit quickly, increasing turnaround time.

TECHNICAL DETAILS

Transport Dimensions:
Width : 1521mm
Height : 1950mm
Length : 2467mm
Weight : 1014 kg

Operating Dimensions:
Width : 2997 mm
Height : 1797mm (Max 2991mm)
Length : 3996mm

Power Requirements:
The simulator requires
a 3-phase supply of
380 - 415V at 16A per
phase 50Hz.

Coin Operated - No need for an operator, works completely stand alone. This means you don't have the added overheads of an operator or the problems associated with having to staff the simulator.

Small Footprint - The compact footprint allows you to site the simulator in most locations. Because of it's capacity it does not need a lot of people to be busy and gives you the maximum return on investment.

Return on Investment - The simulator will pay for itself within one year in good sites and within two years on average sites. Giving you a dynamic attraction which becomes more economical to run every year.

Reliability - Is not an issue with the U2 Mirage. This is one of the key strengths of the simulator we use military grade parts to make sure that they can take the high amount of usage that we expect the simulator will get.

Choice of 6 rides - Makes sure that there is something for everyone, appealing to all age groups. The ability to easily change rides and monitor the most popular gives you maximum flexibility to improve your income.

Two Seater - Takes double the income of any single seater products. Makes the simulator more social allowing people to go on together making the simulator a real family attraction.
